Put your hands on excellence

Model 327, autumn brown

A brand you can trust

Allium Railing systems

Prestige, strength and durability, is in a few words what characterizes Allium railings. Designed and made in Quebec since 1989, we know how to meet all your renovation or residential construction needs.

Over the years, Allium has constantly innovated to offer you a vast range of products, made to measure, easy to install and to maintain. That's why today Allium is one of the leaders in the manufacturing of aluminum products for balconies.

With Allium, you add a touch of elegance to your house while guaranteeing the safety of your family and loved ones.

Put your hands on excellence, choose Allium.

Model VT-300, black, clear tempered glass

Aluminum, the best choice

.....
Its lightness, its resistance to corrosion,
bad weather and environmental deteriora-
tion make aluminum a material whose quality
can't be beat.

Your safety, our guarantee

Because we have at heart the safety of our customers, their family and loved ones, every stage of production is subjected to a rigorous quality control.

Result: a well-kept finish made with the greatest detail and a strong product in compliance with the standards of the National Building Code.

Model 343, white, square column 6 "

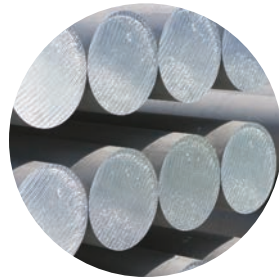

Our standard of excellence

Allium is proud that all of our products are made in Canada, with only Canadian components, which contributes to the excellence and the reputation of our brand since 1989.

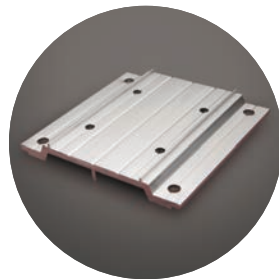

Advantages

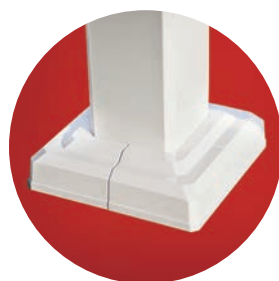

Solid, resistant and maintenance free

Canadian made, our profiles are made of aluminum 6360 T6 with a resistance of 205 MPa (30 000 pounds per square inch). As hard as steel, aluminum does not rust.

The base, a single piece

The post bases, are a single piece of aluminum 6005A T61. To avoid any weakening caused by heat, they are mechanically assembled instead of being welded.

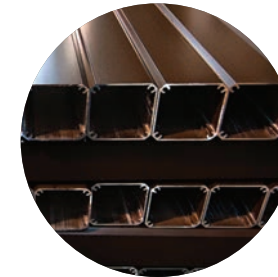

A well-kept finish

For a more aesthetic look, our post bases are covered by a PVC post skirt that hides screws and installation ties.

Our handrails

Our handrails are made of two pieces, adding to the robustness of the railing while hiding the bindings.

A strong design

More than 20 % thicker, our hollow structural sections are designed to guarantee the strength of our products.

An innovative design

A vast choice of innovative designs and trendy models are available. Our railings harmonize wonderfully with any type of residence.

A variety of colours

The ultra-resistant Duracron® acrylic coating that is applied on our extrusions meets AAMA 2603 specifications. It is available in six attractive colours – white, black, clay, commercial brown, autumn brown and ivory – at the same price and without any additional delivery time. It offers outstanding film integrity, color control and mar resistance.

Made to measure

Allium railings are exclusively made to measure. Before passing to the production stage, an analysis by our experts allows us to deliver you a product answering all your specific needs. Furthermore, our railings are built for easy installation. Instructions accompany every order.

- Grey or beige

Colours

ALLIUM Aluminum Waterproof Decking System is the ideal solution for your balconies and patios.

With **ALLIUM** Aluminum Waterproof Decking, you're building a deck to last, outperforming all other deck materials.

You'll also save time and money by not having to waterproof, paint or stain.

Ideal for any type of climate

ALLIUM decking system is your ideal waterproof decking. Great for all climates, lightweight and fire resistant.

Light, Waterproof and fire resistant

ALLIUM decking boards are waterproof and can be installed on any structure or surface as long as there is a reasonable slope for the water to runoff. The boards are light and entirely fire resistant (aluminum melting point is at 660 °C).

A resisting and nonslip finish

Our boards are powder coated with an added slip-resistance. Powder coating paint process is one of the most durable, resistant and environmentally friendly finishes out there. Exceeding the specification 2604 of the AAMA (American Architectural Manufacturers Association). Available in two colours, grey and beige.

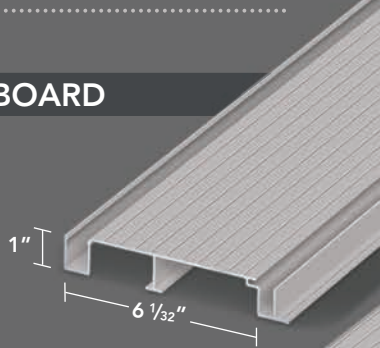

The boards measure 6 1/32" (153mm) in width and lengths vary, up to 244" (6.198m) in length.
